Summary

Environmental degradation of the St. Croix River prompted community leaders of its border communities to come together to address the issue and resolve to improve river health by improving operations in their respective organizations.

Hudson Hospital & Clinic successfully implemented a paper use reduction initiative and enhanced recycling program, which became a building block to ongoing organizational performance improvement.

Since 2010, Hudson Hospital and Clinic achieved a median recycling rate of 37.60 percent of total hospital waste (HHI goal: 15 percent).

The Problem

The St. Croix River, a national scenic waterway and state boundary of Wisconsin and Minnesota, was in trouble. Environmental runoff and development were degrading water quality and disrupting natural ecosystems. In coordination with other community leaders, Hudson Hospital & Clinic responded by passing a board of directors resolution that pledged to decrease the amount of waste generated by the hospital, including implementing enhanced recycling programs.

The Strategy Selected

Leaders from Hudson Hospital recognized the role of the hospital as a valuable community asset, and aligned their sustainability work with the mission of the hospital, improving community health. Additionally, incorporating sustainability into the organizational culture of the hospital was a reflection and alignment with the community values regarding sustainability. In 2009, the hospital leaders created the first "green team" at the hospital. Together the team (see Fig. 1) established a formal set of goals, including an enhanced recycling program and intense paper-reduction initiatives throughout the hospital. Using the resources of Practice Greenhealth and the Healthier Hospitals Initiative (HHI) to guide their planning, implementation and evaluation of these programs, a process was created which became the basis for later capturing additional recyclable materials such as sterilization wrap (blue wrap), plastics, aluminum, tin, paperboard, pallets, and cardboard.

Implementation Process

The team met with managers and staff of the housekeeping, surgery center, procedure center and facilities/maintenance departments regarding how best to capture the recyclable materials, as well as identify key locations for receptacles and collection processes that worked with employee work flow and facility design. Employees were accountable for disposing of materials properly, including protected health information, biohazardous and landfill waste streams. To evaluate the recycling program, the team used data tracking tools of Practice Greenhealth and HHI, and conducted regular audits of the contents of the various waste streams to inform and support ongoing performance improvement.
Benefits

- $21,000 in cost savings, $500 in cost avoidance from single-use device reprocessing program.
- Since 2010, achieved a median recycling rate of 37.60 percent of total hospital waste (HHI goal: 15 percent).
- Since 2010, reduced regulated medical waste to a median 4.21 percent of total hospital waste (HHI goal: 10 percent).
- Diverted 50-100 tons of demolition debris from area landfill.
- Listed in national Top 20 Critical Access Hospitals.

Challenges and Lessons Learned

As is the case with many hospitals, the team was challenged with the mechanical barrier of limited square footage and the space needed to accommodate multiple receptacles. Pairing up environmental services staff with clinical staff, solutions were found and implemented, and relationships were strengthened. The initial success of the paper-reduction initiatives and recycling programs led to further waste reduction initiatives, including a closed-fluid waste management system, reusable sharps containers, and electronics recycling with community partners. The team is now incorporating environmental processes into future building design.

Sustainability has become integrated into the organization’s culture and remains a priority at the critical access hospital. Sustainability measures have been incorporated into performance evaluations, new employee orientation, engagement surveys, newsletters and hospital signage. The team maintains effective communication regarding sustainability initiatives throughout the organization by keeping information fun, interesting and celebratory.
The Team

Marian Furlong, President and CEO, Hudson Hospital & Clinic

Ann Ripley, VP of Operations and Green Team Leader, Hudson Hospital & Clinic
